

Estimated Annual Agricultural Pesticide Use Washington State, Statewide Ranking 2014-2018

21 July 2026

Summary

Table 1 lists the rank and best available estimates of mass applied (kg) for the top 80 agricultural pesticides **statewide in Washington** during 2018, as reported by [USGS Estimated Annual Agricultural Pesticide Use](#) data, summed across all Washington counties. The table also includes rank by 3-year average (2016-2018) and 5-year average (2014-2018) estimates of mass applied, each compound’s organophosphate/carbamate classification (see the Washington OP & carbamate trends chapter), and — for comparison — its 2018 rank within Yakima County alone. Rankings and estimates are based on the *EPest-high method* described by [Thelin and Stone \(2013\)](#) and [Baker and Stone \(2015\)](#):

“EPest-low and EPest-high, are used to estimate a range of pesticide use. Both EPest-low and EPest-high methods incorporate proprietary surveyed rates for Crop Reporting Districts (CRDs), but EPest-low and EPest-high estimates differ in how they treat situations when a CRD was surveyed and pesticide use was not reported for a particular crop present in the CRD. In these situations, EPest-low assumes zero use in the CRD for that pesticide-by-crop combination. EPest-high, however, treats the unreported use for that pesticide-by-crop combination in the CRD as missing data. In this case, pesticide-by-crop use rates from neighboring CRDs or CRDs within the same region are used to estimate the pesticide-by-crop EPest-high rate for the CRD.” [-Pesticide National Synthesis Project webpage](#)

USGS lists several caveats of these data, in particular:

- Reliability decreases with scale (e.g. “detailed interpretation of where and how much use occurs within a county is not appropriate”); summing county estimates to a statewide total inherits this caveat.
- EPest-low estimates are more likely to reflect state-based restrictions on pesticide use than EPest-high estimates.
- A blank cell in the source file (no reported/estimated use for that compound-year-county) is treated as zero in this chapter.
- **2019 is excluded from this ranking.** The 2019 county-level file available at the time of writing covers only 69 compounds nationwide (48 for Washington), versus roughly 400 compounds in every other year from 1992-2018 — a partial/preliminary release, not a real drop in the number of pesticides in use. Anchoring the ranking on it would silently omit hundreds of real compounds. This chapter uses 2018 (the most recent complete year) as the 1-year snapshot instead; re-run with 2019-included windows once a complete 2019 release is available.

A compound’s statewide rank and its Yakima County rank can differ substantially — a compound used heavily across WA’s wheat and row-crop counties but sparingly in Yakima’s orchards will rank higher statewide than in Yakima, and vice versa. **NA** in the Yakima rank column means the compound was not among Yakima County’s top 80 for 2018.

Table 1: Top 80 EPest-high Estimates Statewide (WA), 1-Yr (2018), 3-Yr Avg, 5-Yr Avg, with OP/Carbamate Classification (OP = organophosphate, CB = carbamate, - = neither) and Yakima County Rank

Rank (WA)	Compound	Class	EPest-high 1yr	EPest-high 3yr avg	EPest-high 5yr avg	Rank (Yakima)
1	METAM	-	10983788	9543622	7815926	7
